UTILICOVER® is:
• Extremely Lightweight
• Strong and Durable
• Easy to Install
• Safe
• Cost Effective
• Available in Custom Widths

Far Better than Concrete Cable Trench Covers

UTILICOVER® fiberglass trench covers are the logical alternative to concrete trench covers for substations. The strong and durable fiberglass cover system installs easily and can be quickly removed for trench access by one person. The UTILICOVER® fiberglass cover is extremely lightweight, one-fourth the weight of heavy concrete panels, and can be lifted by one person with far less risk of back injuries or other injuries. Unlike concrete, UTILICOVER® panels are individually adjustable to accommodate inconsistencies in trench width. Despite the larger spans shown above, the typical trench span is 24”. At that span with a 500lb. point load at mid-panel, deflection is approximately 1/8".
Case History

Two substation installation jobs in Virginia and Tennessee were completed in March of 2007. Benefits of the new covers were obvious and immediate. In the course of six and a half days, a three-man crew used only twelve tons of UTILICOVER® panels to replace seventy tons of concrete covers! The project manager stated the UTILICOVER® covers were installed more quickly by hand than the concrete covers could be removed with an excavator.

How to Order:

Fill out this page and call us or fax to GEF at 304-755-3150 or Strongwell at 276-645-8003.
